Full-stack engineer with 4+ years of independent work across web, mobile, cloud, and embedded firmware. Ramps quickly in unfamiliar stacks and owns projects end to end, from reverse engineering protocols to shipping production systems.

## Skills

- **Languages:** TypeScript, JavaScript, Python, C++, SQL, Swift.
- **Frameworks and Tools:** React, Next.js, Node, React Native, Electron, Flask, Django, Xcode, OpenCode.
- **Infrastructure and Data:** AWS, Terraform, Docker, Linux, PostgreSQL, MongoDB, ESP32, KiCad, Arduino, PlatformIO.

## Work Experience

### **Freelance Software Developer - Self Employed**

2022 - present - <https://www.upwork.com/freelancers/~018c4b3d99dc5b3529>

#### **Dash Two, Inc.**

May 2026 - present - <https://dashtwo.com>

- Serve as sole engineer for an outdoor advertising company, owning development, maintenance, and infrastructure for an internal web application used by dozens of staff across North and Central America.
- Develop and maintain features across a Python Flask API and Next.js (TypeScript) frontend, including availability search, and creating proposals for customers.
- Migrated the Flask API from EC2 and the Next.js frontend from Netlify to AWS ECS Fargate, with infrastructure managed in Terraform.
- Built CodePipeline CI/CD so pushes to main and staging branches deploy automatically to production and staging environments.

#### **360iSuite**

2022 - present - <https://360isuite.com>

- Develop a tardy-slip kiosk app with Electron, React, and SQLite on Ubuntu Linux, supporting QR code scanning and on-screen keyboard entry to print student slips, with in-app updates delivered via electron-updater and GitHub Releases.
- Deployed across 30+ public and charter schools in the Los Angeles area.
- Implemented Jaeger-based telemetry to collect logs and traces from kiosks in the field.
- Set up reverse SSH access to remotely diagnose and fix issues on school-deployed machines, reducing the need for on-site visits.

#### **Black Lotus Development**

2023 - present - <https://blacklotusdevelopment.io/kyo-interface>

- Designed and built a wireless sim-wheel-to-RC-car interface with force feedback, supporting Logitech and MOZA wheels.
- Reverse engineered proprietary force feedback protocols using Wireshark USB HID captures, and implemented them in C++ firmware for an ESP32-S3 transmitter and ESP32-C6 receiver over the ESP-NOW wireless protocol.
- Designed custom PCBs in KiCad, fabricated and assembled by JLCPCB, with an OLED display for configuration and system monitoring.

#### **Firefall Math**

2023 - 2026 - <https://www.firefallmath.com>

- Converted an online math learning platform into an offline-only Electron app for correctional facilities and other environments without internet access.

### **Software Developer and Co-Owner - TwinJet - San Francisco, CA**

2023 - present

- Co-acquired and operate a courier logistics platform used by 24 delivery companies across 3 continents.
- Maintain the Python/Django/PostgreSQL backend on Linode, including an email parser that ingests orders from 20+ platforms (Toast, Square, Grubhub), and develop an LLM-based replacement using Ministral 3.
- Building a cross-platform mobile app with React Native (Expo).

### **Cloud Support Engineer - Akamai - Intern, Remote**

May 2024 - August 2024

- Joined customer calls and analyzed logs on the FinServ support team, troubleshooting issues on the Akamai Edge Network.
- Presented three technical whiteboards on DNS, HTTP/HTTPS, and caching/mapping.

## Education

### **UC Berkeley Extension Full Stack Web Development Bootcamp**

2021 - 2022

### **Akamai Technical Academy - Network Engineering**

2022 - 2023
